PROJECTS

- MEDICAL COST PREDICTION – GITHUB PDFMachine Learning | Regression - Develop a machine learning model that predicts medical costs based on various input features such as age, gender, BMI, smoking habits, geographical location, and pre-existing conditions.
- TELECOM CHURN PREDICTION - GITHUB PDFMachine Learning | Classification - Developed and implemented machine learning models to predict customer churn for a telecom company, leveraging various algorithms to analyze customer behavior and retention factors.
- SPORTS IMAGE CLASSIFICATION - GITHUB PDFDeep Learning | CNN - Built a 100-class image classification model using transfer learning with ResNet50, leveraging pre-trained weights for accurate feature extraction. Improved performance by freezing early layers and customizing output for multi-class prediction.
- SMART WATCHES ANALYSIS - GITHUB PDFPython | Web Scrapping | Power BI - This project involves extracting smartwatch data from an e-commerce website using web scraping and regular expressions in Python and perform data analysis on top selling brands.
- LIBRARY DATABASE MANAGEMENT - GITHUB PDFMySQL | Data Modeling - To design and implement a database by integrating data from various CSV files, ensuring proper data type assignment, and establishing relationships between tables using an Entity Relationship Diagram (ERD).
